

Abstract

A back cleaner operating on a direct current battery which supplies current to turn an electric motor with an extension rod approximately eight (8) inches in length which operates as the drive shaft. A circular disk, approximately twenty-four (24) inches in diameter, or, if more than one disk is attached they would be smaller but large enough to cover the entire back of the user. The user would have removable circular wash cloths to fit over the disk or disks. Soap and water would be applied to the circular wash cloth and the person would back up to the back cleaner to efficiently and gently clean the back area of the user.

- A. Shower Wal
- B. Adjustable Bar Attached to Wall
- C. D. C. Battery
- D. Electrec Motor
- E. Rotating Rod
- F. Circulating Disk and Wask Cloth
